Reference: 30395, Assessment of Facility Fee

Dear Ms. Madden:

As per our conversation of 2-3-86, concerning the question of Consolidated Casting Corporation's registration and payment for a Hazardous Waste Facilities Fee assessment.

To clarify the items listed in Section III - On-Site Waste Management Facilities concerning:

FAC No. 1 - Container Storage Area
Storage of Waste number(s)
006 - Acid, Hydrochloric (HCL)
007 - Sodium Hydroxide Sol.

This container storage area is where the Waste Sodium Hydroxide and Hydrochloric Acid is stored until quantity of containers (barrels) are accumulated for disposal. The accumulation time is less than 90 days. The maximum quantity of barrels stored average is 40. This material is solidified Sodium Hydroxide.

FAC No. 2 - Tank (Surface) Storage/Processing of Waste Number(s)
006 - Hydrochloric Acid (HCL)
007 - Sodium Hydroxide
008 - Neutralized Acidic and Caustic Wastes

In the first place 008 is the combination of 006 and 007. The Hydrochloric Acid (HCL) is used to lower the Ph of the Sodium Hydroxide so that the solution can be flushed into the sewer system. Secondly, the tank is less than 100 gallons.

These hazardous materials are necessary in the Investment Castings Industry to cleanse the castings of ceramic material trapped in crevices and holes of the casting.

I hope this will be useful to you so that we may clear up the question of Consolidated Casting Corporation being a hazardous waste management facility. We only generated, we do not store for over 90 days, nor do we provide services for other companies.

If I can help answer any other question(s) you might have, please don't hesitate to call.

Sincerely,

CONSOLIDATED CASTING CORPORATION

Joe E. Hull
Corporate Safety Administrator
